

From reading a letter, to completing a university degree. From watching your grandchildren playing, to seeing your team play, this can all be possible with the latest wearable devices for Vision Impairments.

I qualified as a Dispensing Optician in 1999 and work with the World's leading developers of Assistive Technology, such as Orcam and eSight to help people with visual impairments to live a more independent life in education, employment, mobility and daily living.

As an independent optician, I demonstrate a range of devices in one appointment to find which works best for you. Appointments are offered at my consulting rooms in London's Harley Street, or at your home or workplace. I also work with several opticians and Low Vision clinics across the country. I look forward to showing you this amazing, transformative technology.

Support

Low vision, visual impairment, sight impairment or blindness are some of the terms used to describe vision loss. When vision cannot be further improved by spectacles, contact lenses or surgery, then Assistive technology devices such as Orcam MyEye, eSight or digital magnifiers can make all the difference.

The support and help needed is different for everyone living with vision loss as individual circumstances vary hugely. A useful guide from the NHS can be found here <https://www.nhs.uk/conditions/vision-loss>

Eye Conditions

There are a large number of conditions that cause vision loss, ranging from glaucoma, macular degeneration, diabetic retinopathy, retinitis pigmentosa, congenital conditions or even injury. Whatever the reason for vision loss, an Assistive technology device can help.

For more information on conditions leading to vision loss, please click this link to the RNIB <http://www.rnib.org.uk/eye-health/eye-conditions>

Contact Us

We would love to get in touch and discuss your options and give you a demo of our technology.

Please call in the first instance, or feel free to use the contact form, and someone will get back to you as soon as possible.

Testimonials

David Demers Age 35

I lost my vision suddenly at age 29 due to Leber Hereditary Optic Neuropathy. 4 years after my initial diagnosis, I discovered eSight. I use eSight every single day both at work and at home. I can use any computer, tablet or smartphone in the office and am able to read facial expressions in the workplace. The more I use eSight the more I discover things I able to do – things, I thought I would never be able to do again. eSight has given me back my career, my social life and my confidence. To me, that is absolutely priceless.

Robby Dayhill Age 13

eSight has been a huge help in the classroom. Before eSight, I struggled to read the smartboard and other materials, and this made learning the way my classmates did very hard. My future is now brighter knowing that eSight will help me as I study and one day start a career!

Pia Simone Age 43

eSight has become part of my daily routine; I use it when I am cooking to create delicious meals for me and my family. I use it at work; I am on the computer all day and with eSight I can easily type and read articles and emails, review resumes or do research online. eSight has been a life changer!
